Faces In The Forest: The Endangered Muriqui Monkeys Of Brazil

Synopsis

The woolly spider monkey, or miqui, is one of the most threatened primate species in the world. Because of deforestation in their natural habitat—the Atlantic coastal forests of southeastern Brazil—the miquis are confined to less than 3 percent of their original range. As of 1987, there were only a dozen forest fragments known to support a total miqui population of about 500. As of 1998, at least 20 forests are known to support at least 1,000 miquis. This book traces the natural history of the miqui from its scientific discovery in 1806 to its current, highly endangered status. Karen Strier provides a case study of this scientifically important primate species by balancing field research and ecological issues. Through her accessible presentation, readers gain a broad understanding of primate behavior and tropical conservation.

Book Information

Paperback: 170 pages

Publisher: Harvard University Press; 1 edition (May 1, 1999)

Language: English

ISBN-10: 0674290089

ISBN-13: 978-0674290082

Product Dimensions: 6.1 x 0.4 x 9.2 inches

Shipping Weight: 8 ounces (View shipping rates and policies)

Customer Reviews

The book tells the story of Karen Strier's 20 year long research among the miquis, the largest primate of the Americas, on a rain forest conservation unit in Caratinga, state of Minas Gerais, Brazil. Karen's findings have enabled her to write a very influential article criticizing the "myth of the typical primate". It is a solid work of primatology and yet very much readable. It contains scholarly work without pedantry. It documents an exemplary scientific career dedicated to research and the environment.

Great read on the largest primate (after humans) in the American continent. Dr. Strier is the leading

researcher on the Muriqui and does a lot of field work herself, so the book reflects her first hand knowledge. A write up of a visit to the reserve of Muriquis mentioned in the book can be found on my blog.
