Making Spatial Decisions Using GIS And Lidar: A Workbook

Synopsis

The third book in the Making Spatial Decisions series, Making Spatial Decisions Using GIS and Lidar focuses on scenario-based problem solving using an integrated workflow in ArcGIS® for Desktop. The scenarios in Making Spatial Decisions Using GIS and Lidar feature lidar as the primary data source and lidar-related analysis as the primary skill focus. Lidar is a powerful, and increasingly popular, data source used to create elevation and terrain models with very high accuracy. Students and self-learners can use the exercises in this book to develop their GIS skills. Downloadable data and access to a 180-day free trial of ArcGIS are available on the Esri Press "Book Resources" webpage, esripress.esri.com/bookresources. Instructor resources are available by contacting esripress@esri.com.

Customer Reviews

A GIS organization asked me to review this book early in 2016. The workbook consist of several exercises that appear to be well organized but not that applicable to real world uses of LiDAR in GIS. I tried several of the exercises and even more disappointed when every one I tried has some sort of issue that prevented me from completing the exercise. I submitted the issue to ESRI and they were determined to be bugs but nothing was done about the issues. I would avoid this book unless you enjoy learning by troubleshooting problems.

Great book and workbook
