Backcountry Skiing: Skills For Ski Touring And Ski Mountaineering (Mountaineers Outdoor Expert Series)

Synopsis

Martin Volken and his co-authors provide skiers with all the tools and knowledge they need to safely and successfully travel in the mountains. The guide features intermediate-to-advanced techniques for ski touring and ski mountaineering, from planning wilderness trips to perfecting turns in rolling terrain and mastering uphill climbing. For those skiers ready for a more technical, high alpine environment, they draw on traditional mountaineering skills, including roped climbing, setting protection anchors, using ice axes, climbing on bare rock, and more. In addition to mastering techniques, *Backcountry Skiing* also features information on recent evolutions in ski equipment; avalanche safety tips; a primer on mountain weather and glaciers, trip planning tools, a discussion of emergency situations, nutrition and fitness advice, and winter camping basics. Throughout this guide, a special emphasis is put on being well-informed and making good decisions-whenver you strap on your skis and skins and head out into the backcountry.

Customer Reviews

This probably is the sixth of the Mountaineers Outdoor Expert Series books that I have purchased as published by the Mountaineers Books. As with those other texts, I was able to learn some things and was surprised and disappointed at the information which was not covered. This book is no exception. On the positive side, there is very good instruction on roped skiing and on situations requiring belay stations and stances with skis. The avalanche safety section is good, but not definitive. The strong point of this book is the techniques for skiing in various terrain, along with the

transitions that inevitably occur. For this, I would say this is one of the better, more up-to-date instructional books. A big disappointment comes with the lack of depth in discussing the merits of various gear options. For example, in the beginning there was a brief illustration of the history of telemark vs. alpine touring setups, followed by a bare discussion about the merits of each. This fundamental question is then quickly dismissed simply by the statement "the best answer remains to choose the right tool for the job, or quite possibly to go with whatever style you prefer." That completely misses the point on why someone would buy this in the first place; these experts should give much more information to the reader before the readers embark on the very expensive quest to discover this for themselves...the reason for an "expert" series in the first place. Another example is their discussion on ski weight. It starts out good, but then the authors punt again by saying "Shop at a store where the salesperson can answer technical questions and can point you in the right direction for your intended application." But isn't this the reason one would buy this book??
