# The Man Who Predicts Earthquakes: Jim Berkland, Maverick Geologist--How His Quake Warnings Can Save Lives

## Synopsis

Meet Jim Berkland, a California geologist whose forecast of the famous October 17, 1989 World Series Quake that rumbled through the San Francisco Bay Area was right on the money. This is the first book to document a geologist's uncanny ability to foretell earthquakes around the world. This fascinating read includes stories of earthquake survivors, a wealth of details about seismic activity in earthquake prone regions around the world.

## Book Information

Paperback: 282 pages

Publisher: Sentient Publications; 1st Sentient Publications Ed edition (December 15, 2005)

Language: English

ISBN-10: 1591810361

ISBN-13: 978-1591810360

Product Dimensions: 6 x 0.7 x 8.4 inches

Shipping Weight: 12.8 ounces (View shipping rates and policies)

Average Customer Review: 4.6 out of 5 stars [See all reviews](#) (18 customer reviews)

## Customer Reviews

When I first saw this book's title and subtitle, thoughts of a new Alfred Wegener came to mind. I thought that, perhaps, this "maverick geologist" is really on to something. But it became clear to me after reading the first few pages that this book was not at all what I had expected. Instead of basing predictions on well-grounded science, some of the parameters used by this geologist tend to border on what many would call the paranormal. Nevertheless, I read on; perhaps his approach really works, I thought. After reading the book cover to cover, it is my opinion that if this geologist has indeed discovered a fairly reliable way of predicting earthquakes, then this book does not do him any favors - in fact it does the exact opposite. This book is really a jumble of topics related to earthquakes with no apparent logical progression. It contains a very brief mini-biography of the geologist (a couple of pages), several repetitive comments on his campaign to have his methods recognized by the scientific establishment, anecdotes from people who have experienced various earthquakes, many repetitive statements on certain earthquakes, discussions on animals being able to sense earthquakes before they happen, on people who claim that they can do the same, on

clairvoyants and even on Nostradamus's predictions - all these peppered haphazardly throughout. What I believe the author should have done to truly promote this geologist and his methods is to be very objective and neutral; to subject his results to the scrutiny of the scientific method and very carefully analyze his predictions (and whether or not they pan out) using standard scientific and statistical methods. This would establish whether his predictions are indeed better than chance, and if so, by how much.
