# Beach Processes And Sedimentation (2nd Edition)

## Synopsis

Introduces beach processes within an approach that balances an engineering perspective against a purely geological one. Provides an up-to-date review of the current understanding of beach processes as well as applications to solve coastal problems (erosion, management issues, etc.).

Discusses issues related to beach erosion and other processes. The second edition of Beach Processes and Sedimentation has been updated to include information gathered from two decades of science and engineering in the field, reflecting the vast increase in knowledge since the first edition. Discusses the rise of coastal zone management as well as patterns of wave transformations and dissipation within the surf zone, and how these water motions produce cross-shore movements of sediment resulting in beach-profile variations. An essential reference book for many readers: from beach front property owners to politicians contending with beachfront erosion to engineers addressing beachfront reclamation projects.

## Book Information

Paperback: 544 pages

Publisher: Prentice Hall; 2 edition (October 2, 1997)

Language: English

ISBN-10: 0137549385

ISBN-13: 978-0137549382

Product Dimensions: 7 x 1.1 x 9 inches

Shipping Weight: 2 pounds

Average Customer Review: 2.7 out of 5 stars [See all reviews](#) (3 customer reviews)

Best Sellers Rank: #1,853,233 in Books (See Top 100 in Books) #62 in [Books > Science & Math > Earth Sciences > Geology > Geomorphology](#) #616 in [Books > Science & Math > Nature & Ecology > Oceans & Seas > Oceanography](#) #967 in [Books > Textbooks > Engineering > Environmental Engineering](#)

## Customer Reviews

Content-wise, this is still a an excellent text on beach and coastal processes. However, at least on the copy I sourced through , the quality of the printing and particularly the illustrations is poor and it is not worth the money.

The images have very bad quality and the book arrived with some damage. But the geological content in the book is very good.

Basic for any person interested in coastal processes. No more words.
