Exploring Creation With Zoology 3: Land Animals Of The Sixth Day (Young Explorer Series)

Synopsis

This third book in the zoology series takes students on a safari through jungles, deserts, forests, farms, and even their own backyard to explore, examine and enjoy the enchanting creatures God designed to inhabit the terrain. This book will have your Family snuggling together as you discover amazing animals from primates to parasites, kangaroos to caimans, and turtles to the terrifying T-Rex!

Book Information

Series: Young Explorer (Apologia Educational Ministries)

Hardcover: 288 pages

Publisher: Apologia Educational Ministries (March 1, 2008)

Language: English

ISBN-10: 1932012850

ISBN-13: 978-1932012859

Product Dimensions: 11.1 x 8.6 x 0.9 inches

Shipping Weight: 2.4 pounds (View shipping rates and policies)

Average Customer Review: 4.5 out of 5 stars [See all reviews](#) (44 customer reviews)

Best Sellers Rank: #98,336 in Books (See Top 100 in Books) #225 in [Books > Science & Math > Biological Sciences > Zoology](#)

Customer Reviews

Wow! I'm blown away by how obvious what "side of the camp" these negative reviews originate from. We LOVE Jeannie's Zoology books and this one delivers quality just as her others have. No one is going to "convert" an intelligent design believer into an evolutionist or vice versa here! Come on...is any parent who believes in evolution really even going to consider this book for their child? There are differing opinions and name-calling and put downs are not going to sway anyone to the opposite side. Parents who are looking to educate their children from this philosophy's view point will find these books a treasure! Anyone who will not consider the possibility of an intelligent designer will find them laughable. Is anyone really surprised by that?

The Zoology books are taught from an immersion approach. This means your child will be fully immersed in the study of land animals. This includes classification and binomial nomenclature (scientific names). The beginning of the book has a list of all items needed for each lesson. Be warned, science will quickly become your child's favorite class. The books are well written and

presented at a higher level than most elementary science books. Regardless, your child will still learn everything necessary, and have fun doing it.

Well, I will eat my shoe if several of the other "reviewers" of this book have actually purchased a copy. I happen to own this book and all of Mrs. Fulbright's other books. I also sell them in my educational bookstore. The Zoology 3 book is by far Mrs. Fulbright's best book so far. It is VERY scientific, contrary to what others here have said. Frankly, it used many big words and perhaps that is what has caused their minds to be so confused. Anyway, this book, like the others continues to offer an easy conversational tone, excellent experiments and projects. The "Map It" and "Track It" activities are just too much fun!! I highly recommend this book to anyone out there wanting a meaty science curriculum for their children. You won't be disappointed!

My kids and I have been using these books for 2 school years now and we are enjoying them immensely. She teaches things plainly to their understanding, as well as, about the truth of the world's existence, GOD Created! Thank you, Mrs. Fulbright for the labor that you have put into the work of these wonderful books. We love them.

As a homeschool family this book gives us the tools to teach in depth science to our elementary students. Our students love the added touch of geography in placing the animals on the map and the art of drawing their animal tracks.

This book is just great. It has the truth spelled out plain and simple. I love the fact that the author can use her scientific knowledge to stand up to the evolutionary rhetoric that many others spew out. My kids just want to keep reading this even when science is done for the day. Thanks so much for making this book available to us.

We have used these books for homeschooling science before. They are great. My two children love to do science and love animals, so these books have been perfect for us. We appreciate that it is written from a Christian point-of-view. This book is well organized and easy to use - for the students and their teacher. :-) This is not your average dry science book that turns children from science. I would recommend it to anyone and so would my children.

This is a beautiful, informative, and scientifically accurate text. Creationists and Darwinists have the

same info, it is just evaluated on the belief (or unbelief) in a Divine Creator. After all let's remember to evaluate science in a scientific manner. If a theory cannot be proven then it is still a theory (darwin evolution). I haven't yet heard about or seen, molecule to man evolution recreated in a lab as part of an experiment to prove it as fact. Let's all be respectful of other's opinions.
